**Co-Presenter**

This presentation will demonstrate the current production version of the Georgia DOT (Esri ArcGIS) GIS portal known as GeoTRAQS. The portal incorporates searching, viewing, and querying GIS data. Layers link to business dashboard pages of photos, reports, and other documents. Layers also link to an implementation of Esri ArcGIS GeoPortal Extension for ArcGIS Server for searching, browsing, and accessing GIS data/metadata. Users can add external GIS web services or services from the GeoPortal. Maps created in the TerraGo GeoPDF format can be used for Adobe PDF and exporting markup data to Shapefile manifests. The capabilities of the TerraGo Toolbar within Adobe PDF will also be demonstrated.
