

5.4.2

Putting Road Projects on the Map

Presenter

Michael Cresap
Director of the Transportation Information Division
Mississippi Department of Transportation
mcresap@mdot.state.ms.us

Co-Presenter

Bruce Aquila
Sr. Transportation Consultant
Intergraph Corporation
bruce.aquila@intergraph.com

This presentation will discuss Mississippi DOT's need for locating projects spatially and their decision to create a web based tool for staff to capture the location of a project. The information collected drives the base LRS for asset management and gives the state the ability to graphically depict projects on a map. This is critical in decision support and gives the state the ability to evaluate environmental impacts of a project and more accurately estimate the project costs.
