Co-Presenter

The American Community Survey (ACS) has replaced the decennial census "long form" survey for capturing characteristics of the population. Therefore, questions on the Journey-to-Work are now part of the ACS. Based on 2005 ACS records, 25% of those surveyed (160,000 workers) do not have adequate place of work information and need their workplace imputed or allocated. This presentation will talk about this allocation process currently underway.
