Co-Presenter

Greg Ulp
Project Manager
GeoDecisions

A system designed for the Pennsylvania Department of Transportation to support the process of providing improvements to state highways and bridges projects.

The MPMS IQ application is a web-based GIS mapping application for Highway and Bridge projects on the Commonwealth's Twelve Year Transportation Program and Regional Transportation Improvement Plans (TIPs). This application was created to allow users to map and attain other information for highway and bridge projects. Searches may be performed for projects by county, legislative district, planning partner, or PennDOT engineering district. Additionally, projects can be mapped individually by MPMS project ID number.
