**Co-Presenter**

The Washington Transportation Framework (WA-Trans) is focused on research and development of prototype software utilities to support sharing and integrating GIS data. Additionally detailed documentation of processes is required to share with partners. The WA-Trans Prototype data sharing Web Portals have been researched and tested. These portals and the underlying administrative processes are the subject of this presentation. The Web Portals allow for:

- The ability for local providers to submit GIS data to WA-Trans through an Internet portal without having to alter their systems.
- The ability for users to obtain data through an Internet Portal in their own formats.
- As much automation as possible will be implemented for back end data integration and QA/QC processes.
