Co-Presenter

Babu Krishnasamy

TRIMSWeb is the Web-based Tennessee Roadway Information Management System (TRIMS) developed for the Tennessee Department of Transportation (TDOT) and managed by the TDOT GIS. This system is intended for all TDOT Intranet users and is specifically important to the TDOT planners and engineers. It is based on the requirements for the TRIMS client-server application, which has been in production for some time. TRIMSWeb is scalable, although it primarily focuses on delivering the core functionality of TRIMS in the web environment. The architecture of TRIMSWeb is built with three key user requirements in mind: a) ease of administration; b) performance; and c) scalability.
