#### **Co-Presenter**

April Blackburn  
Jared Causseaux

FDOT has developed an internal Enterprise Information Portal that provides high-level information using the Department's Business Data. Part of the Portal is the Enterprise GIS View. This project was developed by working with the Department's Executive Management to get their requirements for the Department's data. This presentation would include 1. The goal and vision for the Enterprise Information Portal 2. Using GIS to meet these goals with the Enterprise GIS View and 3. Future plans for the Enterprise use of GIS for the Department.
