**Co-Present**

Jesse Jay  
GeoDecisions

As a joint venture between GeoDecisions and Oklahoma DOT (ODOT) a new prototype GRIP application was built to demonstrate innovative ways of transmitting ODOT information to the general public. Based on the speed and usability of Google Maps and the power of Oracle Spatial, the team set out to prove the viability of pushing web-based mapping to the extreme. In keeping with OGIS, this hybrid approach to map display utilizes GeoRSS and eliminates the need for common traditional 3rd party mapping software.

GeoDecisions has been working with ODOT's Planning and Research Department to help build and maintain several key technical systems to better support the agencies needs.
