

GIS Complete System

Easier
More Powerful
and Everywhere

Common Business Patterns

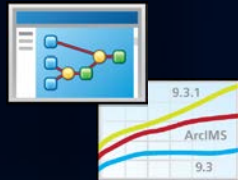

Asset Management

Store, manage & maintain accurate asset records

Modeling & Analysis

Transform data into actionable intelligence

Field Collection

Get information into and out of the field

Situational Awareness

Disseminate knowledge where & when it's needed

Constituent Engagement

Share information with stakeholders and citizens

Transportation and Environmental Planning

ArcGIS Runtime

New Developer Kit to build custom focused solutions

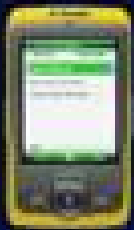

iOS

Android

**Windows
Phone**

**Windows
Mobile**

Windows
.Net WPF
Java
Qt

Linux
Java
Qt

ArcGIS Runtime

Key Points

- **ArcGIS Runtime is a developer technology for developing desktop or mobile applications. Not for browser based or server applications.**
- **It is integrated in to the ArcGIS system – it allows you to author (package) content in desktop and consumed in a custom Runtime application.**
 - **Types of packages include: Map, tile, locator, geoprocessing**
 - **ArcGIS Server can deliver content to clients**
- **Small footprint**
- **Fast display**
- **More than mapping – integrate advanced geoprocessing, editing, and analytical capabilities**
- **Modern API**
- **Easy to Deploy**
