Co-Presenter

Mike Horsfall

GeoSpatial Sales Technical Manager
Bentley Systems
Mike.Horsfall@bentley.com

Present how Michigan DOT is using document management in design and construction. How Bentley Systems have added GIS functionality to their ProjectWise document management system.

Bio(s):

Dan is the manager of the Engineering and Surveying Support Units. As a licensed Land Surveyor and Civil Engineer he has worked in both the private and public sector. At the Michigan DOT he has worked on a statewide survey crew, managed photogrammetry, supervised statewide planning activities and now heads up surveying and engineering automation activities. In the spring he helps out with the family maple syrup business which produces 200 to 400 gallons of syrup a year depending on the season.

Mike Horsfall has worked for Bentley Systems for the past 6 years, but has used Bentley technology since 1989. Mike's first experience with ProjectWise was in 1998 and before coming to Bentley he was the ProjectWise Administrator on the Texas SH130 project, this was a \$1.4billion dollar, 49 mile design build, that at the time was the first in Texas and the largest in the US. Mike has experience with various GIS systems, like Smallworld and ESRI and working at Bentley has allowed him to use this knowledge to assist clients in the best use of Bentley technology.
