Enterprise GIS Enabled Photo Log at Ohio DOT

Presenter

Joe Hausman
Ohio DOT

Joe.Hausman@dot.state.oh.us

Co-Presenter

Larry Mattke
Mandli Communications

Since 2001 Ohio DOT employees have had the ability to perform virtual travel at their desktops using their web based photo log system. When used as a standalone application this has been a useful tool that saves time and money. Making it even more powerful and convenient is the ability for ODOT GIS developers to link the photo log images with their enterprise GIS applications. With the click of a button clients can view recent or historical image that pertain to the maps and data they are browsing.

This presentation will cover the transformation from standalone photo log workstations to an enterprise wide photo log system. It will identify some important things to keep in mind to ensure that the collected images and data integrate seamlessly with the rest of your department data. It will also demonstrate how you can use the photo log data and advanced tools to update the current GIS data set.
