

Session

1.3.1 Oklahoma DOT's Geographical Resource Intranet Portal, A Technology Upgrade (GRIP V3)

Presenter

Tim Callahan
Oklahoma Department of Transportation
tcallahan@odot.org

Co-Presenter

Jesse Jay
GeoDecisions

Oklahoma Department of Transportation (ODOT) with GeoDecisions has planned, designed, developed, and implemented a web enabled Geographical Resource Intranet Portal (GRIP) application. The application enables users to view, query, map, and analyze a wide variety of enterprise transportation information. GRIP version three (GRIPv3) features a modularized design platform, providing a more flexible and maintainable application and enhanced visualization, layout, and analysis capabilities. This presentation will share some of the improvements that ODOT gained due to the recent upgrade to a .NET architecture, scalable vector graphics (SVG) and the new graphical user interface (GUI).
