##### Co-Presenter

Requests for Data (RFD) come with increasingly varied format types, detail and temporal states. Details of a data product provider and how the contradictory, conflicting and down-right confusing different attributes requested by parties mandating data of specific format without regard to availability and/or fidelity are executed. The topic will touch on a discussion about requests for consistent and repeatable data on schedules in conflict with annual freeze cycles requiring the data to be extracted from a transactional environment. Ideas will be explored on providing a self-service environment, utopian customers and tools to identify data deltas.
