**Co-Presenter**

Gloucester County, New Jersey in cooperation with the Delaware Valley Regional Planning Commission (DVPRC) had embarked on a sign inventory and management project to meet MUTCD compliance requirements. This project will demonstrate the field inventory sign collection process from mission planning and field inventory, to final software deployment of a sign management system to track and maintain sign retroreflectivity compliance. This program was designed to meet the June 13, 2014 deadline of the "implementation and continued use of an assessment or management method that is designed to maintain traffic sign retroreflectivity at or above the established minimum levels." Participants attending this presentation will be introduced to one of several accepted data collection methods and taken through the lifecycle of the project which will include "lessons learned", as well as protocols to

follow during maintenance activities to track asset changes throughout the course of a year in preparation of Capitol budget projections.
