CycloMedia is the market leader in large-scale systematic visualizations of the environment by means of Cycloramas (360-degree panoramic street level photographs). Cycloramas and accompanying Globe Spotter technology integrated by DDOT and JMT with ArcGIS allows the District of Columbia to enhance existing business operations and applications as well as construct new; sophisticated applications for various government efforts. The CycloMedia patented technology used to capture the 360 panoramic images supports 10cm Latitude and Longitude Precision and a 15cm Height Precision. With the street level imagery from CycloMedia, the District will collect and visualize geospatial data like never before; come to learn more about this.
