Co-Presenter

The SDV project is deploying a powerful viewer and analysis tool customized for the NCDOT user community. This tool will allow access to a broad spectrum of users across the enterprise that do not currently have ready access to spatial information. The spatial data viewer is based on the ESRI ArcGIS Explorer tool, which has been integrated with NCDOT data and map services. In addition, the base tool has been customized to add analysis tools and query capabilities into the SDV product.
