Going Mobile: Integrating Field GIS Into the Larger Existing Enterprise

Presenter

Will Holmes
GIS Branch Manager
Kentucky Transportation Cabinet
Will.Holmes@KY.GOV

Co-Presenter

The Kentucky Transportation Cabinet has successfully completed several pilot projects using ArcGIS Mobile (9.3.1) to field collect information and integrate it back into central databases and the larger GIS. During these pilot studies we have defined collection and hardware standards while saving significant staff time in automating data entry. Demand of "New Projects" has been overwhelming. This presentation will share our methods as well as lessons learned and how we are pushing this information out into the larger transportation information enterprise.
