### **Co-Presenter**

I would like to give an overview of TDOT's procurement process, and implementation plans for TDOT's Statewide Continuously Operating GPS Reference Network. Included in this procurement was the requirement of an enterprise solution for TDOT including both Survey Grade and GIS Grade field and office hardware and software for data collection. I would like to offer our experience and expertise on this process and the equipment being used, our implementation to date, and our plans for the future.
