Delaware's Comprehensive Integrated GIS Transportation Solution

Presenter

Donald Burris
Delaware Department of Transportation
Don.Burris@state.de.us

Co-Presenter

Brian Smith
GeoDecisions

Over the last two years the Delaware Department of Transportation (DelDOT) has been working on a comprehensive, easy to use, easy to manage and easy to deploy GIS Transportation solution for their enterprise. With the creation of the framework for DelDOT's GIS web-based Transportation Portal, DelDOT has built a series of applications to better serve the employees at DelDOT. DelDOT has capitalized on the construction of the Portal's framework by building additional applications to manage the Portal; create spatial data associated with enterprise business data and submission of HPMS data to the federal government. This presentation will guide the conference participants through a complete work flow from creating spatial data for business data to serving that data within a web browser, and using the application's content manager to deploy the data. Additionally, the presentation will use that same framework to run HPMS processing and managing that data for Federal Submittal.
